

## Why should you be concerned about emerald ash borer?

Emerald ash borer has killed tens of millions of ash trees in the Midwest and is now in NYS. Ash trees are a common tree along community streets, in the landscape and in natural areas. Do you know how many ash trees you have, the management options and the costs that will be required to minimize and mitigate the losses this pest will cause?

### • Inventory

Urban Forestry, LLC will inventory the location and condition of ash trees

- Street address and/or GPS location
- Park/campus trees – map or GPS location

### • Analysis

We will analyze the inventory results and;

- Identify high quality trees and potential preventative treatment options
- Identify high risk trees and management options
- Develop cost estimates

### • Action Plan

Develop a customized mitigation plan for your community or campus that meets your needs and budget.

### • Funding

Assist you in securing funding assistance to fund the plan.  
NYS DEC has grant funding coming available to assist with this type of project.
